

Project Design Phase-II Data Flow Diagram & User Stories

Date	04 July 2026
Team ID	
Project Name	Personalised Networking Assistant
Maximum Marks	4 Marks

Data Flow Diagrams:

The **Data Flow Diagram (DFD)** illustrates how data moves through the **Personalized Networking Assistant** system. The user enters event details and personal interests through the Streamlit interface, and this information is sent to the FastAPI backend for processing. The backend analyzes the input using **KeyBERT with DistilBERT**, generates personalized conversation topics, and performs fact-checking to ensure the information is reliable. The processed results are then returned to the user through the application interface. At the same time, the generated conversation history and user feedback are stored in a JSON file, enabling the system to maintain records and improve the overall user experience.

Flow

1. User configures credentials for the Watson Natural Language Understanding service and starts the app.
2. User selects data file to process and load.
3. Apache Tika extracts text from the data file.
4. Extracted text is passed to Watson NLU for enrichment.
5. Enriched data is visualized in the UI using the D3.js library.

Entities & Processes – Personalized Networking Assistant

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
User	Event Input	USN-1	As a user, I can enter event details and my interests.	The system accepts the input successfully.	High	Sprint-1
User	Topic Generation	USN-2	As a user, I can generate personalized conversation topics.	Relevant conversation topics are displayed.	High	Sprint-1
User	Fact Checking	USN-3	As a user, I can view fact-checked information related to the generated topics.	Verified facts are displayed with the results.	High	Sprint-1
User	Conversation History	USN-4	As a user, I can view previously generated conversations.	Previous conversations are stored and displayed.	Medium	Sprint-2
User	Feedback	USN-5	As a user, I can provide feedback on the generated conversation.	Feedback is successfully saved in the system.	Medium	Sprint-2
Administrator	System Management	USN-6	As an administrator, I can monitor the application's performance and data.	System data and logs are accessible for monitoring.	Low	Sprint-3
